

U-MoneyCtrl

Internet of Things for Cash Handling devices

We adapt ourselves to your needs

U-MoneyCtrl is the Software Platform of the “**Camaleonte Solutions**” designed by **YOUGO** that makes easy and functional the integration and the management of cash handling systems and through which we are able to adapt ourselves to the existing cash handling portal.

Our platform is a cash management tool, cloud based, through which our smart safe send to the cloud the data of all transactions and all the events occurred, and through which they receive information from the external environment (for example: updates for software and firmware).

Our architecture allows also easy and secure access to data on the cloud, anytime, from anywhere, using any device (laptop, smartphone, tablet or PC).

U-MoneyCtrl realize the Internet of Things on YOUGO Cash Handling devices
